WeChat: cstutorcs

# Recap Exercise

From 2012-13 examination paper:

Assignment Project Exam Help

a. Define a new connective  $\otimes$  for *exclusive-or*,  
using any (combination) of the usual  
connectives,  $\wedge, \vee, \neg, \rightarrow, \leftrightarrow$ . Thus  $p \otimes q$  is to  
mean either  $p$  or  $q$  but not both.

<https://tutorcs.com>

WeChat: cstutorcs

b. Use the new connective  $\otimes$  together with any of the other usual connectives to express the following sentences in propositional logic, where *either ... or* is to be understood as *exclusive-or*. The propositions to be used are given in the text in *Italics* inside brackets.

### Assignment Project Exam Help

Either John will leave the company (*jL*) or Mary will (*mL*).

If John leaves then either the tax department will close (*closeTax*), or Peter will be shared between two departments (*pShare*) and an administrator will be recruited (*recruitA*).

If Mary leaves then either an administrator will be recruited or a secretary will be recruited (*recruitS*), provided John is shared between two departments (*jShare*).

# Definition:

## Semantic Consequence

Let

S be a set of wffs, and

W be a wff.

Assignment Project Exam Help

<https://tutorcs.com>

WeChat: cstutorcs

If whenever all the wffs in S are true W is also true, then W is a **semantic consequence** of S.

# Semantic Consequence cntd.

Denoted as

Assignment Project Exam Help

" $\models$ " is the semantic turnstile

(a metasyMBOL). WeChat: cstutorcs

We also say  $W$  is **semantically entailed** by  $S$ .

If  $W$  is a tautology then

$\models W$ .

# Exercise

Show the following:

- a.  $A \wedge B \vdash A \vee B$
- b.  $\text{snow, mild} \rightarrow \neg \text{snow} \vdash \neg \text{mild}$
- c. Go back to one of the argument at the beginning of the notes you think is valid and show that the conclusion of the argument is semantically entailed by the premises.

# Definitions: Valid, Satisfiable

- *Valid* is just another name for tautology.

So a formula is valid if it is true in every interpretation.

$\models A$  if A is valid.

- A formula is *satisfiable* if it is true in at least one interpretation.

	Validity	Satisfiability
$A \models B$	?? valid	?? unsatisfiable
$A \models B$ and $B \models A$	?? valid	?? unsatisfiable

# Inference

Example: Given

**(pass\_exams  $\wedge$  pass\_projects)  $\rightarrow$  pass\_MSc**

**pass\_exams** <https://tutorcs.com>

**pass\_projects** WeChat: cstutorcs

one can infer (conclude)

**pass\_MSc.**

Example: Given

Assignment Project Exam Help  
 $\text{thursday} \rightarrow \text{logic\_lecture}$

$\neg \text{logic\_lecture}$  <https://tutorcs.com>

WeChat: cstutorcs

Can you infer

$\neg \text{thursday} ?$

# The “elections” example

Given

- If there are national elections then either the Tory party wins or the Labour party wins.
- If the unions do not support the Labour party then it does not win.
- There are national elections.

Can you infer

If the Tory party does not win then the unions support the Labour party?

# The “elections” example: Formalisation in logic

Given

**Elections** <https://tutorcs.com> **Assignment Project Exam Help**  
 $\text{Labour\_wins} \vee \text{Tory\_wins}$   
 $\neg \text{Unions\_support\_Labour} \rightarrow \neg \text{Labour\_wins}$   
**Elections** WeChat: cstutorcs

can you infer

$\neg \text{Tory\_wins} \rightarrow \text{Unions\_support\_Labour} \quad ?$

# The “elections” example: Abbreviation

Premise:

Assignment Project Exam Help

1.  $E \rightarrow L \vee T$

2.  $\neg U \rightarrow \neg L$

3. WeChat: cstutorcs

Conclusion:

$\neg T \rightarrow U$

You can try to use truth tables to see if the conclusion is **Assignment Project Exam Help** semantically entailed by the premises.

<https://tutorcs.com>

**How many rows?** WeChat: cstutorcs

Too many!

E	L	T	U	$L \vee T$	$E \rightarrow L \vee T$	$\neg U$	$\neg L$	$\neg U \rightarrow \neg L$	$\neg T$	$\neg T \rightarrow U$
---	---	---	---	------------	--------------------------	----------	----------	-----------------------------	----------	------------------------

T	T	T	T	T	T	F	F	T	F	T
---	---	---	---	---	---	---	---	---	---	---

Assignment Project Exam Help

<https://tutorcs.com>

WeChat: cstutorcs

.....

..

..

..

.

Can you give an informal proof of the  
conclusion from the premises without using  
truth tables?

# Rules of Inference

## Natural Deduction

(Reasoning purely at the syntactic level)

**$\wedge$ -elimination ( $\wedge E$ )** Assignment Project Exam Help

$$\frac{X \wedge Y}{X}$$

$$\frac{X \wedge Y}{Y}$$

<https://tutorcs.com>

WeChat: cstutorcs

**$\wedge$ -introduction ( $\wedge I$ )**

$$\frac{X, Y}{X \wedge Y}$$

$$\frac{X, Y}{Y \wedge X}$$

## **$\vee$ -elimination ( $\vee E$ )**

$$\frac{X \vee Y, \neg X}{Y} \quad \frac{X \vee Y, \neg Y}{X}$$

<https://tutorcs.com>

WeChat: cstutorcs

## **$\vee$ -introduction ( $\vee I$ )**

$$\frac{X}{X \vee Y} \quad \frac{X}{Y \vee X}$$

**$\rightarrow$ -elimination ( $\rightarrow$ E) (Modus Ponens)**

$X, X \rightarrow Y$  Assignment Project Exam Help

$Y$

<https://tutorcs.com>

**$\rightarrow$ -introduction ( $\rightarrow$ I)**

$X$  **WeChat: cstutorcs**  
assume

.

.

$Y$

---

$X \rightarrow Y$

## $\neg$ -elimination and $\neg$ -introduction (Reductio Ad Absurdum) (RAA) (Proof by contradiction)

$\neg X$     assume

·

·

·

$\frac{Y, \neg Y}{\quad}$

$X$

<https://tutorcs.com>

WeChat: cstutorcs

$X$     assume

·

·

·

$\frac{Y, \neg Y}{\quad}$

$\neg X$

Note: X and Y may be the same wff.

**$\neg X$**  **assume**  **$X$**  **assume**

• <https://tutorcs.com> •

• WeChat: cstutorcs •

• •

**$\frac{\neg X, X}{X}$**

**$\frac{X, \neg X}{\neg X}$**

## $\leftrightarrow$ -introduction ( $\leftrightarrow$ I)

Assignment Project Exam Help

$$\frac{X \rightarrow Y, Y \rightarrow X}{X \leftrightarrow Y}$$

<https://tutorcs.com>

WeChat: cstutorcs

## $\leftrightarrow$ -elimination ( $\leftrightarrow$ E)

$$\frac{X \leftrightarrow Y}{X \rightarrow Y}$$

$$\frac{X \leftrightarrow Y}{Y \rightarrow X}$$

Note: In all the inference rules X and Y stand for any wffs. So the following project example is an application of the  $\rightarrow$  elimination rule:

Given  $A \wedge (B \vee C)$  and  $(A \wedge (B \vee C)) \rightarrow ((A \rightarrow D) \vee (\neg E \wedge F))$  we can infer

$$(A \rightarrow D) \vee (\neg E \wedge F)$$

# Example

You may be wondering why we need the  $\forall I$  rule. Here is an example that uses it.

<https://tutorcs.com>

**Example:**

WeChat: cstutorcs

If there is a shortage of petrol or the tax on petrol is high then people are angry. There is a shortage of petrol.

So people are angry.

## Premise

1.  $(SP \vee HT) \rightarrow \text{Anger}$

2.  $SP$

we want to conclude

**Anger.**

1.  $(SP \vee HT) \rightarrow \text{Anger}$  **given**
2.  $SP$  **Assignment Project Exam Help** **given**

<https://tutorcs.com>

**?**

WeChat: cstutorcs

**Anger**

1.  $(SP \vee HT) \rightarrow \text{Anger}$  **given**
2.  $SP$  **Assignment Project Exam Help** **given**

3, 4, 5, RAA

$\vdash$

$P \vdash W$

denotes  $W$  is (syntactically) derivable from  $P$ .

$\vdash$  is called the syntactic turnstile. It is a symbol in the metalanguage.

**Example:**

In the last example:

$P \wedge Q, R \rightarrow \neg P \vdash \neg R$

# Definition

A **derivation** or **proof** of a wff  $W$  in propositional logic from Assignment Project Exam Help premises, is a finite sequence of wffs such that the last wff is  $W$  and each wff in the sequence is one of the following: <https://tutorcs.com> WeChat: cstutorcs

- a premise, i.e. a wff in  $P$
- an immediate consequence of one or more wffs preceding it in the sequence, as determined by one of the inference rules of propositional logic.
- An assumption (that is later discharged by an application of  $\rightarrow I$  or RAA).

# Exercise

Show

$A \rightarrow B, B \rightarrow C \vdash A \rightarrow C$

(Transitivity of the implication.)

WeChat: cstutorcs

# Exercise

Show

$Q \rightarrow R \vdash (P \rightarrow Q) \rightarrow (P \rightarrow R)$

Assignment Project Exam Help

<https://tutorcs.com>

WeChat: cstutorcs

# Exercise

Consider the following derivation:

1.  $A$  Assignment Project Exam Help  
assume
2.  $A \rightarrow A$  https://tutorcs.com  
1, 1,  $\rightarrow$ I
3.  $A$  WeChat: cstutorcs  
1, 2,  $\rightarrow$ E

Seemingly this proves  $\vdash A$ .

Is there anything wrong with it?

If so, what?

# Exercise

Show

Assignment Project Exam Help  
 $\text{snow, mild} \rightarrow \neg \text{snow} \vdash \neg \text{mild}$   
<https://tutorcs.com>

WeChat: cstutorcs  
It is enough to show:

$p, q \rightarrow \neg p \vdash \neg q$

WeChat: cstutorcs

# Exercises

- Give a formal proof for the “Examination” example.

<https://tutorcs.com>

- Using the basic inference rules ( $\wedge I$ ,  $\wedge E$ ,  $\vee I$ ,  $\vee E$ ,  $\rightarrow I$ ,  $\rightarrow E$ ,  $\leftrightarrow I$ ,  $\leftrightarrow E$ , RAA), show that the derived inference rules hold.

WeChat: cstutorcs

# Be careful when you use assumptions in a derivation

Show  $\vdash \neg(\neg A \wedge \neg B) \rightarrow (A \vee B)$

1.  $\neg(\neg A \wedge \neg B)$  Assignment Project Exam Help

2.  $\neg(A \vee B)$

assume

3.  $\neg A$

assume

4.  $\neg B$  assume

5.  $\neg A \wedge \neg B$  3,4, $\wedge$ I

6. B

4,5,1,RAA

7.  $A \vee B$

6, $\vee$ I

8. A

3,2,7,RAA

9.  $A \vee B$

8, $\vee$ I

10.  $A \vee B$

2,9,RAA

11.  $\neg(\neg A \wedge \neg B) \rightarrow (A \vee B)$

1,10, $\rightarrow$ I

# Notes

- The only inference rules that make use of assumptions are  $\rightarrow$  and  $\neg$ .  
Assignment Project → Exam Help
- It is very important to be clear about the scope of assumptions.  
<https://tutorcs.com>
- Any assumption made during a derivation will remain in force, and ultimately count as one of the premises for the conclusion, unless it gets discharged before the conclusion is reached in the proof.  
WeChat: cstutorcs

# Exercise

Show Assignment Project Exam Help

$\vdash ((P \wedge Q) \vee (\neg P \wedge R)) \rightarrow (Q \vee R)$

<https://tutorcs.com>  
WeChat: cstutorcs

# Exercise

Show

$P, \neg P \vdash Q$

Assignment Project Exam Help

<https://tutorcs.com>

Note:

WeChat: cstutorcs

This exercise shows that anything can be derived from an inconsistent set of premises.

# Notes

➤  $\vdash W$  denotes  $W$  is derivable from an empty set of premises.

➤ Let  $A, B$  be wffs.

If  $A \vdash B$  then  $\vdash A \rightarrow B$ .

If  $\vdash A \rightarrow B$  then  $A \vdash B$ .

In general if

$P$  is a set of wffs, and

$P'$  is a conjunction of the wffs in  $P$ , and

$W$  is a wff then  $P \vdash W$  iff  $\vdash P' \rightarrow W$

# Notes cntd.

- Proofs (derivations) are independent of the "meaning" of the propositional symbol.

Assignment Project Exam Help

<https://tutorcs.com>

So a proof is still valid if the symbols are replaced consistently.

WeChat: cstutorcs

Example: If we have a proof for

$P, Q \rightarrow \neg P \vdash \neg Q$

Then the following also holds (replacing P with snow and Q with mild)

$\text{snow}, \text{mild} \rightarrow \neg \text{snow} \vdash \neg \text{mild}$

$\text{winter} \rightarrow \text{cold}, \text{globalWarming} \rightarrow \neg(\text{winter} \rightarrow \text{cold})$   
 $\vdash \neg \text{globalWarming}$

# Notes cntd.

- For convenience, in a derivation we can use instances of previous derivations. That is, if we have previously shown

$S \vdash W$ ,

<https://tutorcs.com>

WeChat: cstutorcs

and we are now attempting a new proof for another wff, but we have so far shown

an instance of  $S$ , then we can write down the same instance of  $W$  in the derivation without reproducing its entire proof.

## Exercise A

Show **Assignment Project Exam Help**

$$P \rightarrow Q, R \rightarrow S \vdash (P \vee R) \rightarrow (Q \vee S).$$

**WeChat: cstutorcs**

## Exercise B

Show

$$\begin{array}{ll} (P \vee Q) \vee R & \vdash P \vee (Q \vee R) \\ P \vee (Q \vee R) & \vdash (P \vee Q) \vee R. \end{array} \quad \text{and}$$

## Exercise C

Formalise the following argument and show that it is valid.  
You may use the theorems in A and B, above.

<https://tutorcs.com>  
In Britain one of the three parties, Tory, Labour or Liberal Democrat, is in power.

**WeChat: cstutorcs**  
If the Tories are in power the government may support cuts in public spending.

If Labour is in power the government may support tax increases.

If the Liberal Democrats are in power the government may support proportional representation.

So in Britain the government may support cuts in public spending or tax increases or proportional representation.

# Soundness and Completeness

Propositional logic is both **sound** and **complete**.

Let  $S$  be any set of wffs, and let  $W$  be a wff.

<https://tutorcs.com>

**Soundness** means the following:

If  $S \vdash W$  then  $S \models W$ .

**Completeness** means the following:

If  $S \models W$  then  $S \vdash W$ .

So in propositional logic we are justified in switching between syntactic proofs and semantic consequences.

Assignment Project Exam Help

<https://tutorcs.com>

Example

WeChat: cstutorcs

$A \equiv B$  iff

$A \models B$  and  $B \models A$  iff

$A \vdash B$  and  $B \vdash A$  iff

$A \vDash B$  and  $B \vDash A$

It also means in proofs we can use  
equivalences. **Assignment Project Exam Help**

<https://tutorcs.com>

But note in assessments **WeChat tutors** you need to check the  
specifications in the questions carefully.

# Exercise

We know

$$P \rightarrow Q \equiv \neg P \vee Q$$

Assignment Project Exam Help

So

<https://tutorcs.com>

$$P \rightarrow Q \vdash \neg P \vee Q$$

$$\neg P \vee Q \vdash P \rightarrow Q$$

WeChat: cstutorcs

Also

$$\vdash (P \rightarrow Q) \leftrightarrow (\neg P \vee Q)$$

As an exercise show the last using inference rules.

# Exercises

Given the equivalence

$$A \wedge (B \wedge C) \equiv (A \wedge B) \wedge C$$

$$(P \wedge Q) \rightarrow R, \neg(R \wedge S) \vdash \neg(P \wedge (Q \wedge S)).$$

<https://tutorcs.com>

Using the equivalences

$$A \rightarrow B \equiv \neg A \vee B \quad \text{and}$$

$$\neg(A \vee B) \equiv \neg A \wedge \neg B$$

or otherwise show

$$\vdash (P \rightarrow Q) \vee (Q \rightarrow P).$$
